What do we mean by "endpoint" in Device Security?

From laptops to PLCs, IP cameras to infusion pumps: agentless visibility and 55+ ready-made integrations across 12 categories.

Enterprise IoT OT Medical

DEFINITION

Endpoint = anything with an IP address

In classic security, “endpoint” means laptops, servers and mobile devices managed with EDR/MDM. Device Security uses a much wider definition: every device that generates traffic on the network.

Managed

Agent installed → visible

- Laptops & desktops
- Servers
- Mobile devices
- Managed via EDR / MDM

Unmanaged

No agent → blind spot

- Printers, IP cameras, VoIP
- Badge readers, smart TVs
- PLC, HMI, RTU (OT)
- Patient monitors, infusion pumps

Device Security's job: bring both worlds into **one inventory**, **without installing an agent**.

INTEGRATION MAP

12 categories, 55+ integrations

Categories listed in the Strata Cloud Manager onboarding wizard:

EDR
Cortex XDR · CrowdStrike · Defender · SentinelOne · Tanium · Trend Vision One

MDM
Jamf Pro · Microsoft Intune · Omnissa Workspace ONE

NAC
Cisco ISE · Aruba ClearPass · Forescout · ExtremeCloud IQ · Macmon

Network Mgmt
Cisco DNAC · Meraki · Juniper Mist · Aruba Central · NetBrain

Wireless (WLC)
Aruba WLAN · Cisco WLAN

IPAM
Infoblox · BlueCat · Generic / Custom IPAM

Vuln. Scanner
Qualys · Rapid7 · Tenable IO/SC · RidgeBot

Asset Mgmt
ServiceNow · BMC Helix · IBM Maximo · SCCM · IGEL

Identity (IAM)
PAN-OS

OT Device Mgmt
Claroty xDome · Nozomi · Rockwell · Siemens IAH

Healthcare Device
AIMS · Philips Focal Point · SoftPro Medusa

Medical Device
Mindray Device Management

Enterprise OT / Medical

FROM THE PRODUCT · STRATA CLOUD MANAGER

The endpoint side: EDR, MDM, NAC

EDR 7

- **Cortex XDR**
  Use Case: Asset Visibility, Security Hygiene
- **CrowdStrike**
  Use Case: Asset Visibility, Security Hygiene
- **Microsoft Defender**
  Use Case: Asset Visibility, Security Hygiene
- **Network Discovery Plugin**
  Use Case: Asset Visibility
- **SentinelOne**
  Use Case:
- **Tanium**
  Use Case: Asset Visibility, Security Hygiene
- **Trend Micro Vision One**
  Use Case:

MDM 3

- **Jamf Pro**
  Use Case: Asset Visibility, Security Hygiene
- **Microsoft Intune**
  Use Case: Asset Visibility, Security Hygiene
- **Omnissa Workspace ONE UEM**
  Use Case:

NAC 6

- **Aruba ClearPass**
  Use Case: Asset Visibility, Security Hygiene
- **Belden Macmon NAC**
  Use Case: Asset Visibility:Security Hygiene
- **Cisco ISE**
  Use Case: Asset Visibility, Proactive Security
- **Cisco Spaces**
  Use Case: Asset Visibility
- **ExtremeCloud IQ NAC**
  Use Case: Asset Visibility, Proactive Security
- **Forescout**
  Use Case:

FROM THE PRODUCT · STRATA CLOUD MANAGER

OT, healthcare and vulnerability

OT Device Management 5

- **Claroty xDome**
  Use Case:
- **Nozomi CMC**
  Use Case:
- **Nozomi Vantage**
  Use Case:
- **Rockwell AssetCentre**
  Use Case: Asset Visibility
- **Siemens Industrial Asset Hub**
  Use Case:

Healthcare & Medical Device Mgmt 5

- **AIMS**
  Use Case: Asset Visibility
- **AIMS3**
  Use Case:
- **Philips Focal Point**
  Use Case:
- **SoftPro Medusa**
  Use Case: Asset Visibility
- **Mindray Device Management**
  Use Case: Asset Visibility

Vulnerability Scanner 6

- **Manage Engine**
  Use Case:
- **Qualys**
  Use Case: Asset Visibility, Vulnerability Management
- **Rapid7**
  Use Case: Asset Visibility, Vulnerability Management
- **Ridge Security RidgeBot**
  Use Case: Asset Visibility, Vulnerability Management
- **Tenable IO**
  Use Case: Asset Visibility, Vulnerability Management
- **Tenable SC**
  Use Case: Asset Visibility, Vulnerability Management

HOW IT WORKS

How does it see without an agent?

1 **Traffic**
Passive and active traffic monitoring through NGFW and Prisma Access.

2 **Context**
Inventory and status data from third-party integrations.

3 **AI / ML**
Machine learning that infers device type, vendor, model and OS from behavior.

4 **Action**
Device-ID based policy, virtual patching and risk scoring.

2,000+
device attributes

CVSS · EPSS · KEV
for risk prioritization

VERTICALS

Three verticals, one platform

Step one of onboarding: pick the capabilities that fit your environment.

Enterprise Device Security

FOUNDATION LAYER

- ✔ Unified device visibility and context
- ✔ Risk assessment and prioritization
- ✔ Proactive protection with Device-ID and virtual patching
- ✔ Compliance and reporting (e.g. NIST CSF)

+ OT Device Security

- Purdue and Zone-Conduit visualization
- Device configuration files
- Process integrity with Custom Alert Rules
- ICS-specific anomaly detection

+ Medical Device Security

- Medical device utilization
- FDA recall tracking
- MDS2 files
- Utilization and Biomed dashboards

- OT and Medical add on top of Enterprise, and can be enabled later.

USE CASES 1–2

Visibility and security hygiene

Asset Visibility

CMDB · MDM · IPAM · Network mgmt · WLC

Enriches the traffic-based identity with context such as hostname, OS, serial number, ownership and location. The result: one current inventory.

Security Hygiene

EDR · MDM

Brings EDR agent status into the device profile. With CrowdStrike, for example: **Protected**, **Partially Protected**, **Unprotected**, plus isolation status.

Put network-observed devices next to the EDR/MDM inventory and the **control gaps** show up: laptops without an agent, forgotten servers.

USE CASES 3–4

From vulnerability to action

Vulnerability & Exposure

Qualys · Rapid7 · Tenable · RidgeBot · Infoblox · BlueCat

Scanner findings merge with the device profile and are prioritized with CVSS, EPSS and CISA KEV. For sensitive OT and medical devices where scanning is risky, passive analysis takes over.

Proactive Security

Cisco ISE · ExtremeCloud IQ NAC · WLC · NGFW

For a risky or alerting device, a quarantine command goes to the NAC or wireless controller. On the firewall, Device-ID policy and virtual patching keep it contained.

Detect → **Prioritize** → **Quarantine / Policy**

OT & HEALTHCARE

Vertical-specific integrations

OT

OT Device Management

- Claroty xDome
- Nozomi CMC & Vantage
- Rockwell AssetCentre
- Siemens Industrial Asset Hub

MEDICAL

Healthcare & Medical Device

- AIMS / AIMS3
- Philips Focal Point
- SoftPro Medusa
- Mindray Device Management

OT / Biomed tools ⟷ **Device Security + NGFW**

Not a competitor but a **complement**: data from existing OT and biomed tools becomes policy you can enforce on the firewall.

You can't protect what you can't see.

- An endpoint is more than the devices you can put an agent on.
- Device Security sees through traffic and enriches through integrations.
- OT and Medical are layers on top of the same platform.
